

BOLLARDS

Midland Barrier Company offer a wide range of bollards to help provide a simple, secure and cost-effective method of protecting your vehicles and premises or simply controlling access. Strategically located in forecourts, car parks or shop fronts, bollards can provide a day and night deterrent to crime or unauthorised access. Below are just some of the range of bollards we can provide:

Steel Bollards: Suitable for many applications, such as ram-raid deterrence, landscaping, pedestrianisation schemes, property protection and parking control. The steel bollard will not fracture on impact, and is available in a variety of diameters and lengths. They can be adapted to be removable, if required, and manufactured to your own specifications. Steel hooks/eyes can be fitted to allow chains to be attached between bollards.

Removable Bollards
690mm High: £77.50 each.
925mm High: £95.00 each.
1100mm High (inc Handles): £135.00 each.
<i>All prices ex VAT. Delivery extra.</i>

Cast Iron Bollards: Aesthetically pleasing and functional, these are designed to enhance the environment in shopping centres, parks, paved areas, etc. whilst stopping vehicles entering pedestrian areas. The 'Balmoral' Bollard is slightly tapered, may be built in, collapsible or removable, and can be painted on site. The 'Buckingham' Bollard is a top quality product for prestige locations, with a powder coated black finish for lasting protection, and may be fixed or removable.

Ornamental Recycled Plastic Bollards: Constructed from solid recycled plastic, these bollards are durable and very strong. They are impervious to weather and salt laden air, and won't rust, fade or corrode. No painting, preservatives or maintenance is needed, and they can be colour coded with reflective rings. The bollards have a high strength galvanised steel core, and can be concreted on site to provide a ram-raid deterrent.

BOLLARDS

Recycled Traffic Bollards: The increasing use of bollards in pedestrian precincts, walkways, traffic calming schemes and car parks, while desirable architecturally can cause headaches over cost, vandalism and maintenance. These solid recycled plastic bollards are the answer! Elegant, classical and permanent, they demonstrate that you can make the environmentally responsible choice without compromise. The bollards can be colour coded with reflective rings, are durable, very strong, and are impervious to the weather. No painting, preservatives or maintenance will be needed.

Buffer Bollards: These safety bollards are made from impact absorbing recycled rubber. They look substantial due to the density of the rubber material, and are very resilient, yet will 'give' on minor impact and then return to their original vertical positions. They can be fixed below ground or surface mounted, and will not dent, chip or rust and never need painting. Made in two heights, the Buffer Bollard is ideal for car parks where, for example, car doors are opened accidentally onto bollards or where minor parking nudges can occur, or for goods entrances.
